## Tech Salaries: Ten Leading Jobs

June 26, 2007

 By [James Maguire](#)

Finding reliable tech salary data is notoriously difficult. Among the problems: HR departments acknowledge that, in responding to salary surveys, there's often a mismatch between job titles and actual job content.

[Foote Partners](#), based on New Canaan, CT., corrects for this deficiency by reclassifying surveyed participants to match job title and content before including data into the salary compilation engine. Additionally, Foote has access to some 65,000 IT staffers at more than 1,800 companies.

Consequently, the Foote salary numbers below, from Q1 2007, are a revealing portrait of actual tech pay levels.

**Click on any tech job to find additional salary data, and for information about that job title.**

[Information Architect](#). Average salary: \$92,992.

[Manager, Business Systems Analysis](#). Average salary: \$118,829.

[Sr. Business Technology Consultant](#). Average salary: \$135,275.

[Help Desk Manager](#). Average salary: \$80,372.
